Fax: 958181632

### LÍNEA DE INVESTIGACIÓN

The research goal of the Gonzalez-Rey laboratory consists of **knowing the relationship between the central nervous system (CNS) and the immune system, characterizing the connection between infectious diseases and their effects in neurodegenerative disorders, and in processes of pathological aging.** Our investigation focuses particularly on identifying endogenous mediators shared by both systems (neuropeptides) able to tune the immune system and to restore homeostasis under inflammation, autoimmunity and infection, with a therapeutic profile on these disorders and / or that have relevancy in the development and evolution of the above mentioned diseases. Specifically, **we are interested in characterizing the therapeutic effect of these neuropeptides in neuroinflammatory/neurodegenerative diseases** such as multiple sclerosis, Alzheimer's disease, and Parkinson's disease; in the study of their mechanisms of action; in the characterization of the neuroprotective and/or neuroregenerative effects of these molecules during the whole life of the individual, including the oldness. On the other hand, we have recently described that some of these neuropeptides have additional functions showing similar structural characteristics and functional behaviour than those exerted by antimicrobial peptides. In this respect, we are studying **the possible relationship that could exist between these antimicrobial neuropeptides and the potential protective effect in the development of aging-associated disorders.**

## **TESIS DIRIGIDAS RECENTEMENTE (5 ÚLTIMOS AÑOS).**

Characterization of the immunomodulatory and neuroprotective role of the adrenomedullin in neurodegenerative diseases. PhD student: Marta Pedreño. Institute of Parasitology and Biomedicine, IPBLN-CSIC. Granada 2011-2014 (Spain). In progress.

Regulation of the HPA axis by the neuropeptide cortistatin: involvement in behavior, memory and learning under basal and stress conditions. PhD student: Laura Martínez-Escudero. Institute of Parasitology and Biomedicine, IPBLN-CSIC. Granada 2013-2015 (Spain). In progress.

Therapeutic use of the neuropeptides cortistatin and ghrelin in an experimental model of multiple sclerosis. PhD student: Luciana de Souza-Moreira. Institute of Parasitology and Biomedicine, IPBLN-CSIC. Granada 2008-2012 (Spain). Sobresaliente cum laude

Effect of neuropeptides restoring homeostasis in inflammation and autoimmunity. PhD student: Alejo Chorny. Institute of Parasitology and Biomedicine, IPBLN-CSIC. Granada 2006-2009 (Spain). Sobresaliente cum laude

## **TRABAJOS FIN DE MÁSTER REALIZADOS**

- Maxime Guyetant (France, predoctoral). Master Thesis: "Characterization of the action of cortistatin under hypoxic conditions induced by brain trauma". (2012)
- Lorena Carballo-Lago (Spain). Master Thesis: "Immunomodulatory effect of cortistatin in de- and remyelination". (2015).
- Jose María Villaescusa-González (Spain). Master Thesis: "Role of cortistatin as a neuroprotective agent in a dopaminergic cellular model". (2015).
